Problem

We solve a problem that hundreds of Solana users face everyday.

Alice has just made 20% profit trading a new token, \$THETOKEN.

Alice did some investigation using DEX screener app.

Whilst doing her investigation she has noticed that Bob has made 6x on \$THETOKEN as he has bought it hours before her.

Alice would love to get notified next time Bob makes a trade. But how?

Solution

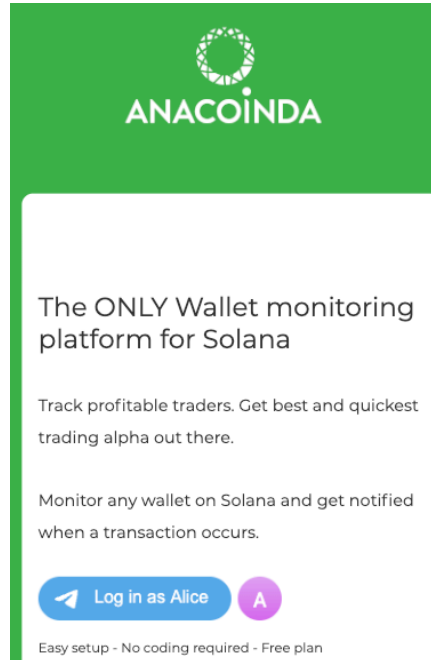

The only wallet monitoring platform for Solana.

Get alerts on token transfers for any Solana wallet.

Demo

Alice logs in with Telegram:

Demo

Alice set up alert on Bob's account:

ANACOINDA

Wallet Watch Alert

Get notified when a transaction occurs on Solana.

Wallet Address:

2tmdrnRWcPBFSaK9FmjXqLCAdC5bt

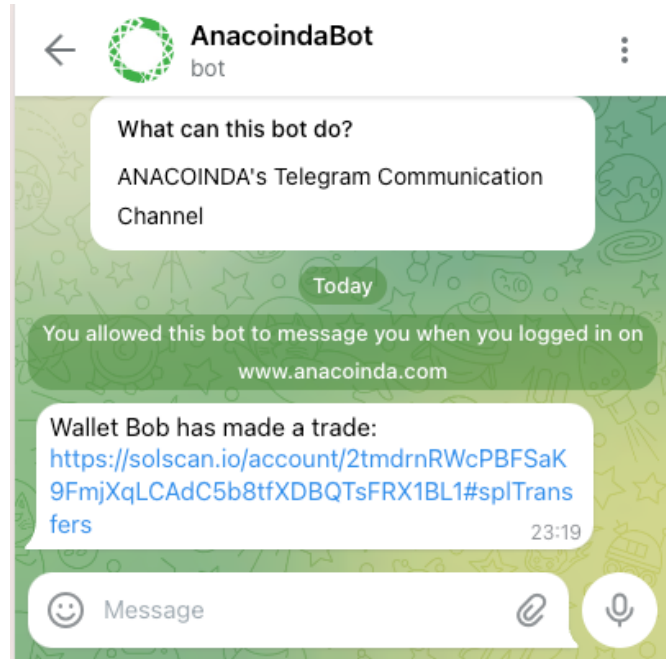

Give wallet a nickname:

Bob

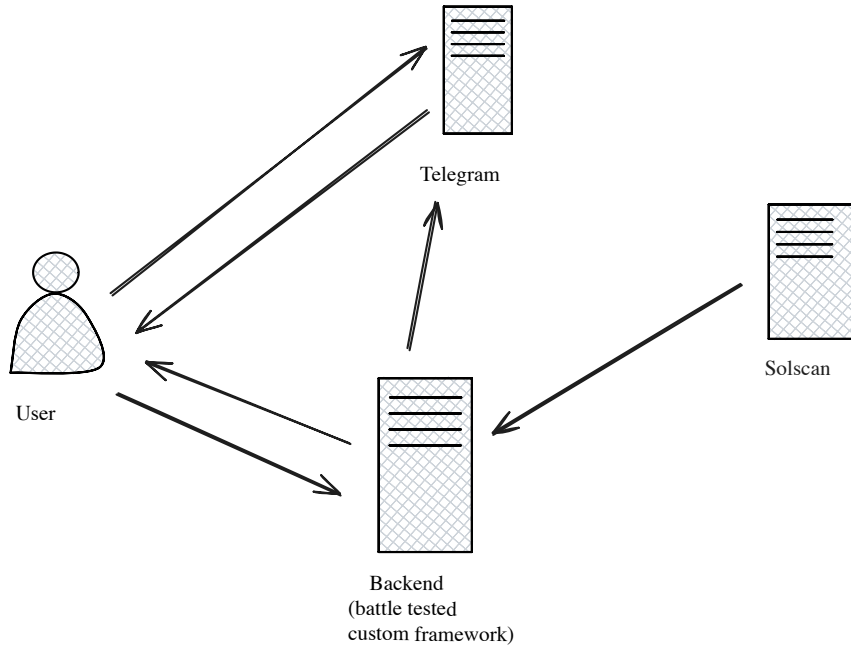

SET ALERT

Demo

Alice gets Telegram alert when Bob trades:

Architecture

Business Model

Free until we get traction and userbase.

Later one of:

- A fee for tracking multiple wallets (freemium model)
- Users have to hold a token to track (DEXTools model)
- Subtle advertising of Solana projects (Advertising model)
